---

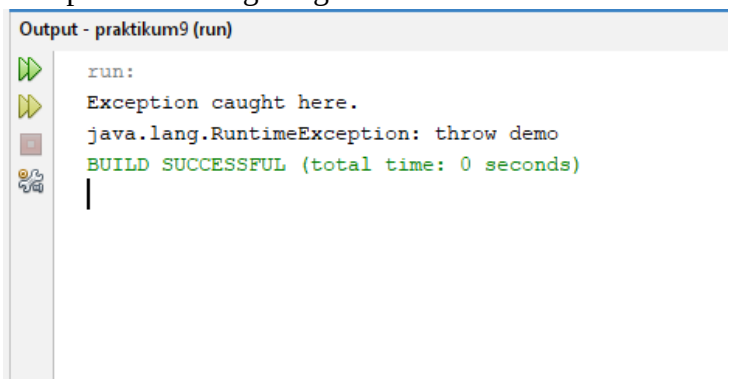

1. Exception Handling dengan Try – Catch

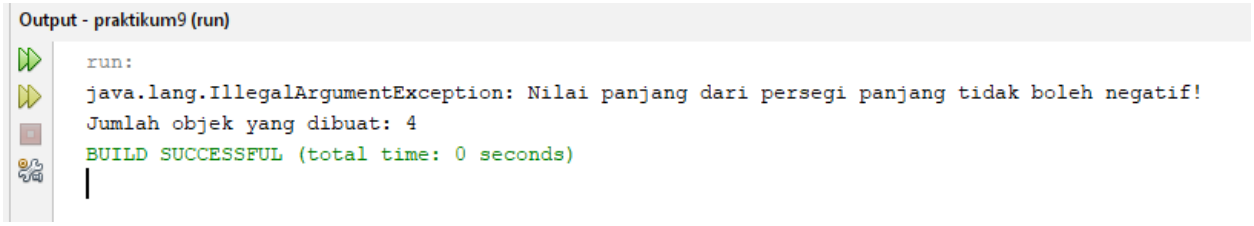

2. Exeption Handling dengan Try-Catch-Finally

3. Exception Handling dengan Throw

4. Exception Handling dengan Throws

5. exception handling ArithmeticException & IndexOutOfBoundsException

```
11  public class ExceptionHandlingDemo {
12      public static void main(String[] args) {
13          // 1: ArithmeticException
14          try {
15              int a = 10;
16              int b = 0;
17              int hasil = a / b; // akan menyebabkan ArithmeticException
18              System.out.println("Hasil: " + hasil);
19          } catch (ArithmeticException e) {
20              System.out.println("Terjadi ArithmeticException: " + e.getMessage());
21          }
22
23          System.out.println(); // pemisah output
24
25          // 2: IndexOutOfBoundsException
26          try {
27              int[] angka = {1, 2, 3};
28              System.out.println("Nilai indeks ke-5: " + angka[5]); // akan menyebabkan IndexOutOfBoundsException
29          } catch (IndexOutOfBoundsException e) {
30              System.out.println("Terjadi IndexOutOfBoundsException: " + e.getMessage());
31          }
32      }
33  }
```
